

How to find someone's email address for free

LUCAS-PERRET

Most organizations use a pattern for their email addresses.

It's often something like:
name@company.com

So if you're looking to find someone's email.

All you need is to guess the right pattern.

And there is a method for this.

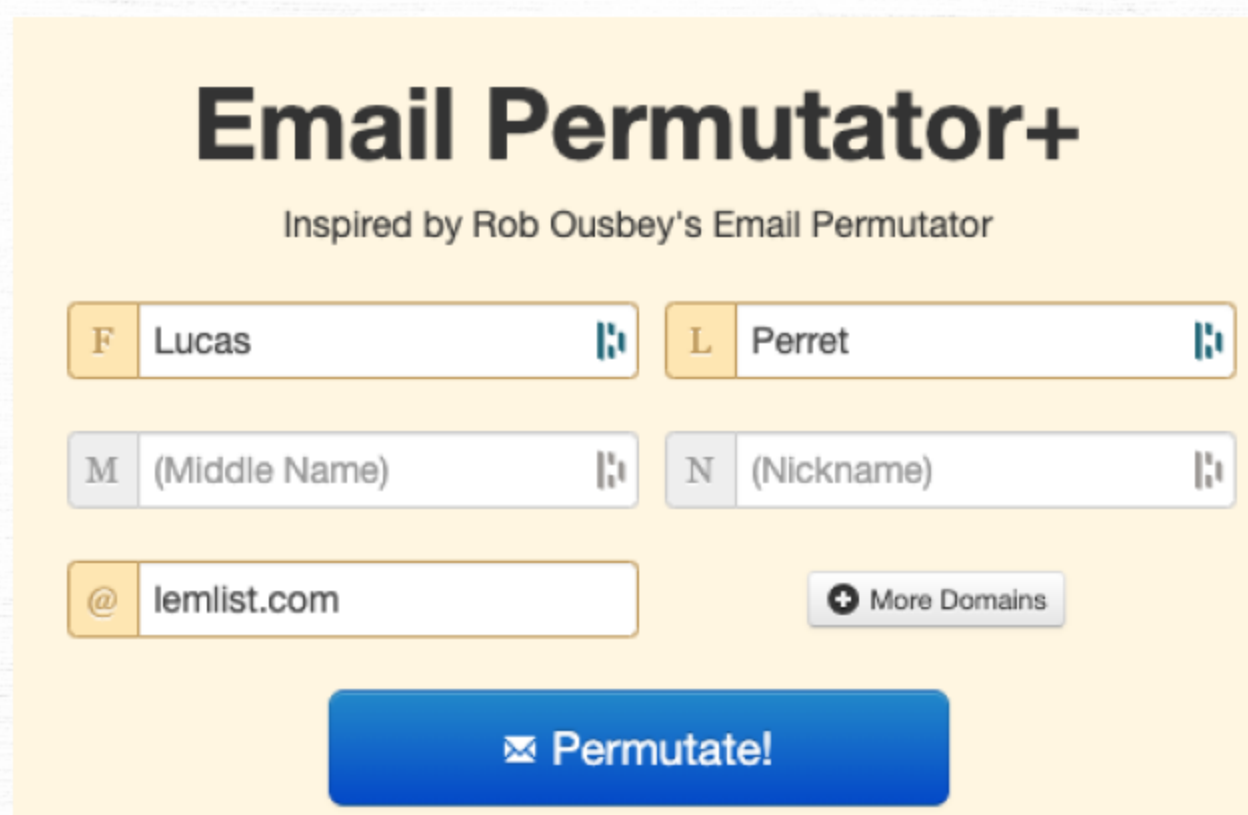

Here is how it works

Get your lead's first name, last name, and domain name and create a list of potential emails through permutation.

You can use "Email Permutator" for this.

The screenshot shows the 'Email Permutator+' web tool interface. It features a title 'Email Permutator+' and a subtitle 'Inspired by Rob Ousbey's Email Permutator'. The interface includes several input fields: 'F' (First Name) with 'Lucas', 'L' (Last Name) with 'Perret', 'M' (Middle Name) with '(Middle Name)', and 'N' (Nickname) with '(Nickname)'. There is also a domain field with '@ lemlist.com' and a 'More Domains' button. A large blue button labeled 'Permutate!' is at the bottom.

Go to insert → Smart chips → Convert to people chip

The screenshot shows the Google Sheets interface for a spreadsheet titled "Free Email Finder GSheets". The "Insert" menu is open, and the "Smart chips" option is selected. A sub-menu is visible, showing the "Convert to people chip" option. Red circles with numbers 1, 2, and 3 highlight the "Insert" menu, the "Smart chips" option, and the "Convert to people chip" option, respectively. The spreadsheet data in the background consists of a list of email addresses in column A.

If you pay attention, 1 row has been converted to a “people chip”.

It means this email is valid
and there is a real person
behind it.
